Ubuntu Technical Training
Learnership Coordinator
Springs

Subject: Motivational letter – Electrical learnership (Ref: EL-2026/14)

Dear Learnership Coordinator,

I am applying for the Electrical learnership (Ref: EL-2026/14). I passed matric in 2025 with Mathematics and Physical Sciences, which the advert lists as requirements. I live in KwaThema and can travel to your Springs training centre and to any workplace in the area.

I want to become an electrician because I enjoy understanding how things work and fixing them properly. Since Grade 10, I have helped my uncle with small repairs at home and for neighbours, such as replacing plugs and light fittings under his supervision. This taught me to follow instructions carefully, to switch off and check before touching anything, and to finish a job neatly. At school, I was in the science club, where I helped set up simple circuits for experiments.

I understand that a learnership means classroom training and workplace practice, and I am ready to attend every day and work early shifts when needed. I am not working at the moment, so I can start immediately. I would welcome the chance to attend an assessment or interview, and I can be reached on 082 345 6789.

Thank you for considering my application.

Kind regards,
Thabo Nkosi
